

Meta: Are you worried about your child's increased screen time? Here are some tips to determine the right amount of screen time for **kids' activities online**.

Screen Time Guide: The Ideal Screen Time for Children Age-Wise

The time spent by an individual using electronic/digital media such as a television (TV), smartphone, tablet, or computer is referred to as screen-time or digital-screen exposure.

Controlling a child's screen time might be difficult in an age when devices are all over. To further complicate matters, some screen time is necessary for **fun activities online** for kids. So, how do you keep track of your kid's screen time? This guide will help you monitor your child's usage of devices.

Screen-Related Issues

Digital exposure, such as **kids' videos**, music, dance, and storytelling, are helpful. You may assist your child to understand and learn from what they see by watching together. Keep in mind that your child can develop any of the following due to excessive or poor-quality screen time:

- Behavioural issues
- A decline in social skills
- Inconsistent sleep patterns
- Low attention span
- Lack of patience
- Obesity

Make Rules for Digital Exposure

1. Agree on setting limits on digital time with your kid and help them understand why it's important to follow the rules.
2. Create device-free zones in the house, keep phones out of the bedroom at night, and use free tools to switch gadgets on and off at different times of the day.

3. Encourage your child to use screens for shorter spells. Make them take a 30-minute break after a long session, like an online class or a movie. Experts advise shutting off devices an hour before sleep to let children relax.
4. Whatever device your kid uses, make sure they use free and prime tools. This allows limiting their access to information and helps monitor the time spent on particular internet activities.

Age Wise Guide

1. 2-5 Years Old

Children under five years should not be exposed to screen usage of more than one hour per day. In addition, children's digital media usage should be prohibited during meals or one hour before bedtime.

2. 5-8 Years Old

Children aged between 5-8 years shouldn't spend more than two hours in front of the screen.

- Make sure they don't fall into the habit of engaging with devices before finishing schoolwork.
- Make sure that the screen time does not take over proper sleep, physical activity, or other healthy habits.

3. 8-15 Years Old

The method alters if your child falls within the age group of 8 to 12 or above. It is necessary to make children understand why screen time should be limited instead of simply setting up rules.

- Three hours of screen time is adequate for a child aged above 8.
- Talking with your child about the content they watch can have a positive impact. This can prevent screen addiction and aid in forging connections with parents as they watch something together.
- Keeping a basic desktop at home, rather than providing the kid with a laptop, phone, and iPad, is another method for limiting screen time.

Conclusion

Excessive or unmanaged screen usage might be detrimental to your child's productivity in the long term. Most parents divide the screen time to include both learning and fun. Yellow Class amalgamates the two by catering to both with its power-packed hobby classes. You may look up creative programmes on the [Yellow Class](#) website. They provide interactive materials to help your youngster effectively.
